

SHOULDER & ELBOW SURGEON

Orthopaedic Surgeon MBBS (Hons) FRACS (Orth) BAppSc (Physio) FAOrthA PO Box 19 Freshwater NSW 2096 Ph: (02) 8014 4252 Fax: (02) 8072 0595 drmarcuschia.com

Shoulder Surgery – Instruction Sheet

- 1. Ice the shoulder 5-6 times a day (20-30 minutes at a time) particularly the first 24–48 hours.
- 2. Sling is to be used at all times except for showering.
- 3. Your dressings are waterproof for showering (however you should not submerge your dressings under water)
- 4. Your dressings should remain intact. If not, cover the wounds with Tegaderm dressing for showers to keep dry. You may get the wounds wet after 1 week.
- 5. Take pain medication prescribed as needed. Try and wean off as soon as tolerated.

You will be discharged from hospital with a limited supply of pain medications. Any additional medications required can be obtained through your GP.

- 6. Call my rooms (02) 8014 4252 with any problems or concerns. Such As:
 - Elevated temperature
 - Continuous drainage from the wound
 - Severe Pain
 - Spreading Redness

A video guide to putting on a sling and showering can be found at <u>https://www.drmarcuschia.com/patients/post-operative-instructions/</u>

*please note that these videos are a guide and your sling may not be the same as pictured in the videos

**if you require a backup sling for showering or hygiene purposes please contact the rooms and you will be provided with details of a supplier*
